## CLAIMS

What is claimed is:

20

- 1. An isolated polypeptide comprising at least about 8 contiguous amino acids of the sequence set forth in amino acids 1-80 or amino acids 189-350 of SEQ ID NO:2.
  - 2. The isolated polypeptide of claim 1, wherein said polypeptide has an amino acid sequence at least about 70% identical to the amino acid sequence depicted in SEQ ID NO:2
- 10 3. The isolated polypeptide of claim 1, wherein said polypeptide has the amino acid sequence depicted in SEQ ID NO:2.
  - 4. A composition comprising the polypeptide of claim 1, and a buffer.
- 15 An isolated antibody specific for a VSHK-1 receptor polypeptide.
  - 6. An isolated polynucleotide comprising nucleotide sequences which encode a polypeptide comprising at least about 8 contiguous amino acids of the sequence depicted in 1-80 or amino acids 189-350 SEQ ID NO:2

7. The isolated polynucleotide of claim 6, wherein said polynucleotide encodes a polypeptide comprising the sequence depicted in SEO ID NO:2.

- 8. An isolated polynucleotide comprising a nucleotide sequence which has at least about 70% nucleotide sequence identity to nucleotides 1-324 or nucleotides 652-1890 of the sequence set forth in SEQ ID NO:1
  - 9. The isolated polynucleotide of claim 8, wherein said polynucleotide hybridizes, under stringent conditions, with the polynucleotide sequence depicted in SEQ ID NO:1

Atty. Dkt. No. 2300-1544 Client Ref. No.: 1544.003

10. An isolated polynucleotide comprising at least about 18 contiguous nucleotides of nucleotides 1-324 or 652-1890 of the sequence set forth in SEQ ID NO:1

- 11. The isolated polynucleotide of claim 8, wherein said polynucleotide comprises the nucleotide sequence depicted in SEQ ID NO:1
  - 12. A recombinant vector comprising the polynucleotide of claim 8.
  - 13. An isolated host cell comprising the polynucleotide of claim 12.
  - 14. A method of detecting a VSHK-1 receptor polypeptide in a sample, comprising:
  - a) contacting the sample with an antibody which specifically binds the VSHK-1 receptor polypeptide; and
    - b) detecting binding between the antibody and molecules of the sample.
    - 15. The method of claim 14, wherein said antibody is detectably labeled.
    - 16. A method of detecting the presence of a VSHK-1 messenger RNA (mRNA) molecule in a biological sample, comprising:
  - a) contacting the sample with a VSHK-1 polynucleotide complementary to VSHK-1 mRNA under conditions which allow hybridization; and
    - b) detecting hybridization, if any.

10

15

20

- 17. A method of identifying a protein that binds to a VSHK-1 receptor polypeptide comprising:
  - (a) contacting said a test substance with a VSHK-1 receptor polypeptide under conditions that permit formation of a protein-protein complex; and
    - (b) detecting the presence of said complex.

Atty. Dkt. No. 2300-1544 Client Ref. No.: 1544.003

- 18. A method of identifying a VSHK-1 receptor ligand, comprising:
- (a) contacting a test substance with a VSHK-1 receptor polypeptide under conditions that permit formation of a ligand/receptor complex; and
  - (b) measuring a signal transduction activity of any complex formed.

5

- 19. A method of identifying a substance which modulates a signal transduction activity of a VSHK-1, comprising:
  - a) contacting the substance with a sample containing a VSHK-1 receptor polypeptide; and
- b) assaying a signal transduction activity of the VSHK-1 receptor polypeptide in the
  presence of the substance, wherein an increase or a decrease in signal transduction activity in
  comparison to VSHK-1 signal transduction activity in a suitable control is an indication that the
  substance modulates a signal transduction activity of the VSHK-1.
- 20. The method of claim 18, wherein said signal transduction activity is measured in an intact cell by a measuring an intracellular level of a compound selected from the group consisting of inositol 1,4,5-triphosphate, diacylglycerol, and Ca<sup>2+</sup>.
